

WishRoll

Dan Crisan

Jerry Wei

Run Xuan Yang

What's WishRoll?

- * Users create wishlists
- * Wishlists stored on cloud
- * Social networking aspect
 - * Search and add friends
 - * See lists of friends
- * Rolls
- * Public/Private/Friends Only Lists

How can we use WishRoll?

- * Keep track of the things that we want to buy
- * Make decision making easier!
 - * Gift-buying

Demo

Technology Used (Front End)

1. AngularJS
2. JavaScript/DOM
3. HTML/CSS/CGI
4. AJAX

Technology Used (Back End)

1. ASP.NET MVC 4
2. SQL Server 2012
3. ADO.NET Entity Framework
4. Razor C#
5. JSON
6. Microsoft Azure

Special Technologies

- * WPF
 - * For validating and resizing uploaded pictures
- * F#
 - * Special functional constructs to eliminate redundant code

What We Learned - Positive

1. Angular.js is awesome
 - * Dynamically change view based on models effortlessly
2. Visual Studio is a crazy good
 - * “I’d switch to Windows for this IDE” – Jerry Wei
3. ASP.NET facilitates learning design patterns
 - * MVC is embedded in ASP.NET

What We Learned - Negative

1. Cloud, namely Azure, is painful
 - * No, seriously
2. ASP.NET and AngularJS both possess a learning curve

What Is ASP.NET

- * A server side web application framework
 - * Built upon .NET Framework

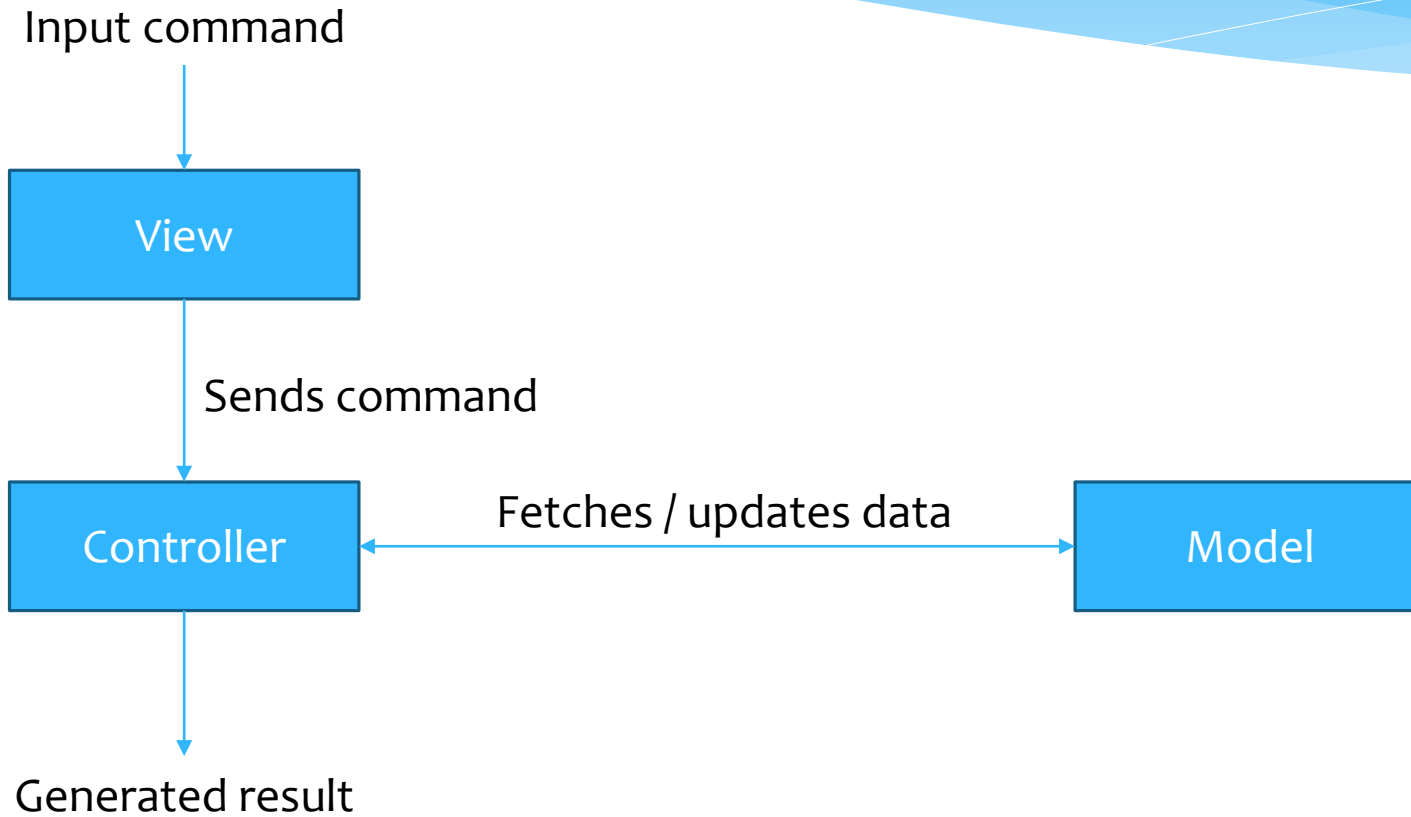

What Exactly Is MVC

- * MVC means Model-View-Controller
- * Model
 - * The data.
 - * SQL Server data tables along with corresponding C#-object representation.
- * View
 - * What users see.
 - * Webpages that are generated and displayed on browsers.
- * Controller
 - * Receives a command from view, takes appropriate actions, looks into and updates the model, and returns a new view or just an action result.

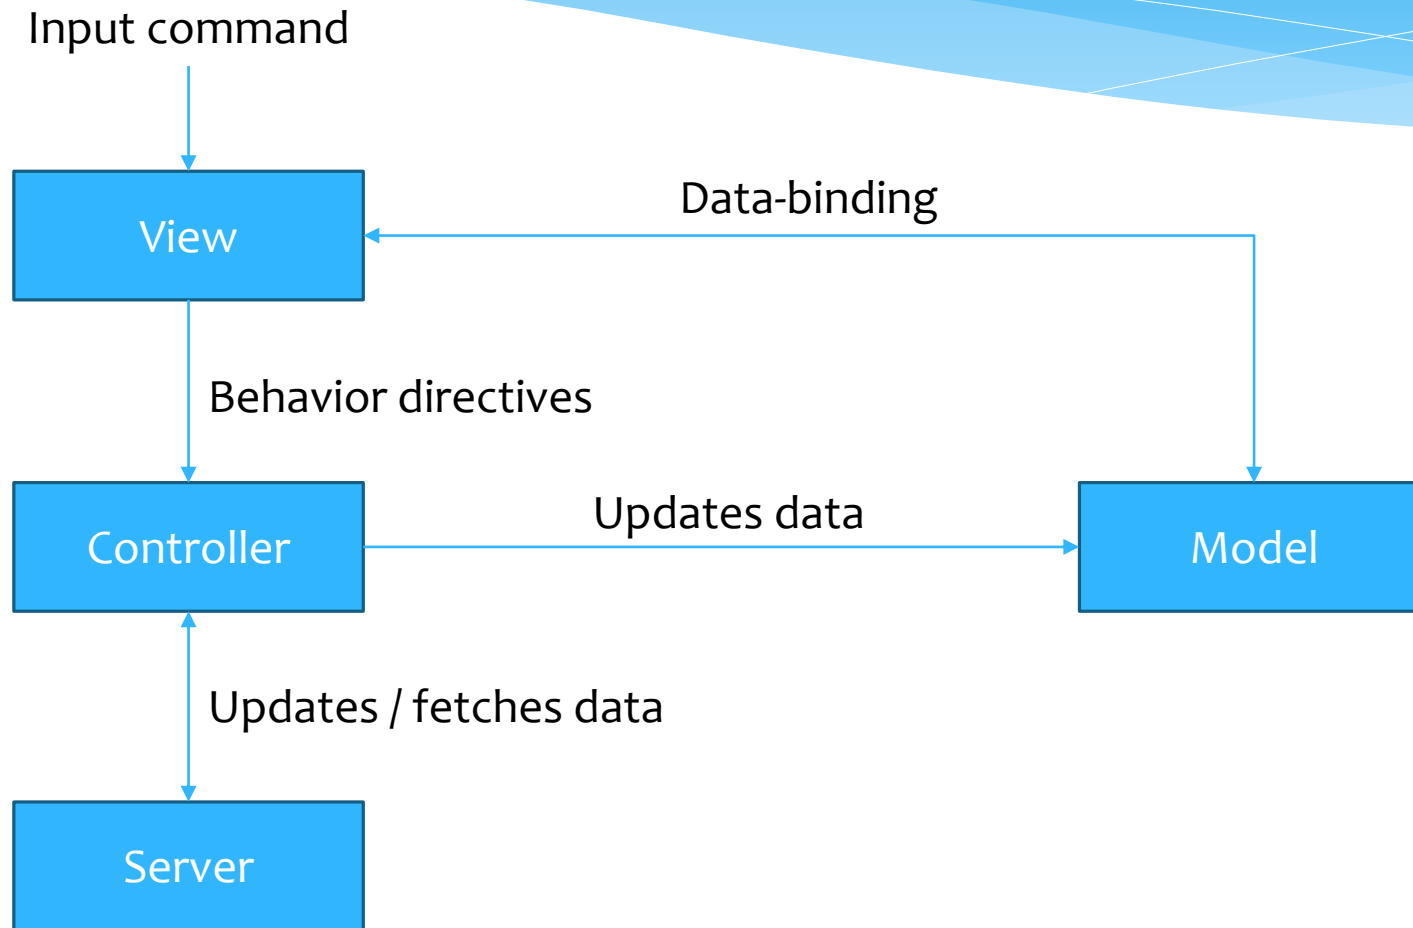

When “About” is clicked

- * User clicks on “About”
 - * “About” is an anchor with href=“//localhost:10946/Home/About”
- * Server receives URL “/Home/About”
 - * “/Home/About” maps to C# method `HomeController.About()`
 - * The code is located at `Controllers/HomeController.cs`
- * The `About()` method simply returns its corresponding view
 - * The view is located at `Views/Home/About.cshtml`
- * ASP.NET translates .cshtml file to pure .html and sends the resulting webpage
- * User gets new webpage

ASP.NET MVC Architecture

AngularJS Architecture
